

AEGIS

Operational Decision & Governance Platform

From platform visibility to governed autonomous operations — a continuously updated understanding of your cloud and Kubernetes environments, turned into safer decisions, governed actions, verified recovery and continuous improvement.

WHAT AEGIS DELIVERS

One operational loop — Know, Run, Enforce, Improve

AEGIS gives engineering and operations teams a live understanding of their platform, then turns that context into safer operational decisions, governed actions, verified recovery and continuous improvement.

KNOW

Platform Foundation

Discover cloud resources, services, dependencies, ownership, configuration drift and infrastructure intent.

RUN

Reliable Operations

Unify operational signals, incidents, SLOs, changes and service health to understand what is happening, why it matters and what action should follow.

ENFORCE

Governed Control

Apply policy, authority, blast-radius assessment, approvals and execution guardrails before changes are made. Verify outcomes and retain evidence.

IMPROVE

Operational Intelligence

Use reliability, cost, anomaly, architecture and operational data to identify risks, improve decisions and progressively reduce recurring operational work.
